Harshith M

CSE Student @ BMSCE | Software & Backend Developer | Node.js, TypeScript, PostgreSQL, AWS | Building Full-Stack and AI Systems

Greater Bengaluru Area

Summary

I’m a Computer Science undergraduate at BMS College of Engineering with a 9.17/10 CGPA, focused on full-stack, backend and cloud development.I build end-to-end applications using Next.js, React, TypeScript, Node.js, Express, PostgreSQL and MongoDB. My projects involve REST APIs, authentication, database design, analytics, AI integrations and AWS-based data processing.Some of my recent projects include:• Quantro — an AI-powered portfolio management platform with trade simulation, backtesting, JWT authentication and an AWS-based market-data pipeline.• Sniply — a URL shortener with custom aliases, asynchronous click tracking and detailed analytics.• Repo Analyser — a GitHub portfolio analytics platform with OAuth, repository scoring, contribution analytics and AI-generated improvement suggestions.I’m also strengthening my foundation in Data Structures and Algorithms using C++ and studying backend architecture, system design and AWS.I’m currently looking for Software Engineering, Full-Stack and Backend Development internship opportunities.GitHub: github.com/harshith-muraliPortfolio: iamharshith.vercel.app
